

How to Interact and Dock

Guild stations operate similarly to ground-based guild halls, offering customizable access and essential services for pilots in space.

Access and Privacy Settings

Station administrators can configure access to be either public or private:

- **Public:** The station is visible to all pilots. Anyone can see the station on their directory and choose to dock there.
- **Private:** The station is restricted. It will only appear on the docking list for players who have been explicitly added to the station's allowed list.

How to Interact and Dock

To utilize a guild station for ship repairs or docking, follow these steps:

1. **Approach:** Fly your ship within **1,000 meters** of the station.
2. **Target:** Ensure the guild station is your active target.
3. **Communicate:** Open the communications dialog by typing `/comm` into the chat or by pressing the `\` key.
4. **Select Action:** The communications window will appear, offering options to either **Repair** your ship or **Dock**.
5. **Docking:** When you select **Dock**, a menu will display all available guild stations you are permitted to enter. Select your desired station from this list to complete the docking sequence.
