Launcher Crash Logs & Self-Healing

What's New

Launcher v4.1.12 added one-click crash log sharing and automatic file repair.

Copy and Share Crash Logs

1. Open the launcher and scroll the right-hand panel to **Diagnostics & Crash Logs**.
2. Click **Copy Latest Crash Logs**. The newest crash report (`.txt`) and memory dump (`.mdmp`) are copied and a confirmation appears.
3. Paste with `Ctrl+V` into the support or bug-report channel of the SWG Secura Discord, with a note on what you were doing.

The **Open Folder** button next to it opens your game folder in Explorer.

Automatic Self-Healing

Problem	What the launcher does
Missing or quarantined game files	Re-downloads them during the update check
Missing or corrupt `user.cfg`	Generates a fresh one
Invalid install path (shell shortcut or GUID path)	Cleans it; if unreachable, falls back to the default folder in your user profile

FAQ and Known Details

What is in a crash log? Client version, OS and hardware or driver info, the error code, and a call stack. Passwords and private files are not included.

"No recent crash logs found"? A dump is only created on an abnormal crash; a normal exit or Task Manager kill leaves none. Also confirm the launcher Install Directory is the folder your client runs from.
